

Technology Equipment Replacement Plan

BUSINESS MANAGEMENT AND ADMINISTRATION PATHWAY

Lamar County Schools, Barnesville, Georgia

Sharonda Bostic-2019-20

The replacement plan includes the following equipment: computers, laptops, printers, located in the business lab, desktop phones, and smart classroom technology equipment. The plan calls for the replacement of computers and laptops with Windows operating systems, every five years. Lamar County Schools makes every effort to meet the scheduled five year cycle.

The implementation of additional labs or equipment on campus may impact Lamar County Schools ability to meet the five year schedule (Ex: new high school being built cause a 1 year delay). Otherwise, the replacement plan is automatic. The technology department allows the teacher to open a technology ticket and repair replacement is determined by the IT department.

Printers and smart classroom technology equipment are replaced as needed. The replacement plan is not used for additional equipment, only to replace existing equipment. If there is a need for additional equipment then the proper budget request must be submitted to the CTAE Director, Dr. Treesomia Walker. Once the budget request is approved, then the equipment will be added to the replacement cycle by the CTAE Director.
